Atty Dkt. No.: STAN-333 USSN: 10/576,568

AMENDMENTS

Please incorporate the following amendments into the subject application.

 (Previously presented) A method of treating a neoplastic disease in a subject, the method comprising;

administering to a subject having a tumor a pharmaceutically acceptable salt of an inorganic selenium-containing compound (iSe compound) in an amount effective to alter a reduction-oxidation state of a tumor cell toward oxidation; and

administering radiation therapy to the subject;

wherein the neoplastic disease in the subject is treated.

- (Original) The method of claim 1, wherein the iSe compound is inorganic selenite.
- (Previously presented) The method of claim 1, wherein the radiation therapy is administered after administering the iSe compound.
- (Original) The method of claim 1, wherein the neoplastic disease is prostate cancer.
 - (Cancelled)
- (Previously presented) The method of claim 1, wherein the radiation therapy is external beam radiation therapy, brachytherapy or systemically targeted radiation.
 - (Cancelled)
- (Original) The method of claim 1, wherein said administering of the iSe compound is intravenous, tumor targeted, intratumoral, or peritumoral.

Atty Dkt. No.: STAN-333 USSN: 10/576 568

 (Previously presented) The method of claim 1, wherein the iSe compound is administered for a time sufficient for metabolism of the iSe compound prior to administering the radiation therapy.

10. (Previously presented) A method of enhancing sensitivity of a tumor in a subject to radiation therapy, the method comprising:

administering to a subject having a tumor a pharmaceutically acceptable salt of an inorganic selenium-containing (iSe) compound in an amount effective to sensitize the tumor to radiation therapy; and

administering the radiation therapy to the subject;

wherein administration of the iSe compound is effective to enhance sensitivity of the tumor to the radiation therapy.

 (Original) The method of claim 10, wherein inorganic selenium-containing compound is inorganic selenite.

12-14. (Cancelled)

15. (Previously presented) A method of treating prostate cancer, the method comprising:

administering to a subject having prostate cancer a pharmaceutically acceptable salt of an inorganic selenite; and

administering radiation therapy to the subject;

wherein administering the inorganic selenite and the radiation therapy provides for a synergistic effect in prostate cancer cell growth inhibition to treat the prostate cancer.

16-18. (Cancelled)

19. (New) The method of claim 1, wherein the iSe compound is selenite.

Atty Dkt. No.: STAN-333 USSN: 10/576 568

20. (New) The method of claim 19, wherein the pharmaceutically acceptable salt of the iSe compound is a sodium salt.

- 21. (New) The method of claim 4, wherein the prostate cancer is androgen-responsive.
- 22. (New) The method of claim 4, wherein the prostate cancer is androgen-resistant.
- 23. (New) The method of claim 10, wherein the tumor is associated with prostate cancer.
- 24. (New) The method of claim 23, wherein the prostate cancer is androgen-responsive.
- 25. (New) The method of claim 23, wherein the prostate cancer is androgen-resistant.
- 26. (New) The method of claim 10, wherein the radiation therapy is external beam radiation therapy, brachytherapy or systemically targeted radiation.
- 27. (New) The method of claim 10, wherein the administering of the iSe compound is intravenous, tumor targeted, intratumoral, or peritumoral.
- 28. (New) The method of claim 15, wherein the radiation therapy is external beam radiation therapy, brachytherapy or systemically targeted radiation.
- 29. (New) The method of claim 15, wherein the administering of the iSe compound is intravenous, tumor targeted, intratumoral, or peritumoral.
 - 30. (New) The method of claim 1, wherein the iSe compound is inorganic selenate.
